

LETTER OF RECOMMENDATION

30 de maio de 2025

To whom it may concern,

I am writing to recommend Pedro Pizzi, who was my student in three courses: Basic Software, High Performance Computing, Cryptography, and Numerical Calculus. Throughout these courses, Pedro showed solid technical skills, a consistent work ethic, and a thoughtful approach to problem-solving.

Pedro was particularly good at tackling complex problems. He approached programming tasks and numerical methods with care and persistence, often finding effective solutions even when the challenges were not straightforward. In High Performance Computing, for example, he demonstrated a good understanding of parallelization techniques and made meaningful contributions to class discussions and assignments.

One of Pedro's strongest qualities is his determination. He remained engaged and focused even when the material was demanding, and he didn't shy away from revisiting difficult concepts until he fully understood them. That kind of resilience made a difference in his academic development and is likely to be valuable in future projects or roles.

Pedro Pizzi is a capable and reliable student. I believe he will bring the same commitment and problem-solving mindset to any opportunity he pursues.

Sincerely,

D.Sc. Pedro Carlos da Silva Lara
