Professional Summary

Full-stack software engineer with 5 years of professional experience, including 4 years focused on software development in high-criticality corporate environments and international teams. Currently working at BTG Pactual, one of Latin America's largest investment banks, developing and maintaining financial and regulatory reporting systems using React, .NET/C#, SQL, and AWS. Work with financial datasets and distributed processing pipelines handling millions of records daily, supporting data-intensive back-office operations.

Previously at GE Aerospace, led the complete backend rewrite of a corporate application with 130+ active endpoints and 1,300+ users, migrating from a Node.js structure to a structured NestJS architecture. Implemented OAuth2 authentication and authorization, automated testing with Jest and Supertest, API documentation with Swagger, and observability using Prometheus and Grafana. Owned the full development lifecycle, from technical design through production deployment. The project enabled global adoption of the application and resulted in the elimination of approximately 800 security vulnerabilities.

Strong experience with Node.js, TypeScript, C#/.NET, RESTful APIs, AWS, distributed systems, and automated testing. International academic and professional experience in Spain, including collaboration with Spanish and North American teams. Creator of GenGuardian, a final thesis project focused on using fine-tuned LLMs for real-time DDoS detection.

Professional Experience

BTG Pactual - May 2026 - Present | Software Engineer, Rio de Janeiro, Brazil

- Develop and enhance financial and regulatory reporting applications for BTG Pactual's Finance team, one of Latin America's leading investment banks.
- Optimize SQL queries and Amazon Athena pipelines processing millions of financial records daily, improving report performance and reliability for business decision-making.
- Develop asynchronous and distributed data-processing workflows using Windows Services, Amazon SQS, and Amazon S3 for the ingestion and transformation of financial data.

DUONEX - December 2025 - January 2026

Full Stack Developer (Professional experience during academic exchange program), Spain

- Backend development using Node.js, TypeScript, and AdonisJS
 - Implementation of Clean Architecture and Domain-Driven Design (DDD) principles
 - Frontend development with Angular
 - Collaboration within a fully international team
-

GE Aerospace - Full Stack Developer - April 2023 - August 2025

- Led the complete backend rewrite (130+ endpoints), migrating from Node.js to NestJS.
- Implemented OAuth2 auth, automated testing, and API documentation using Swagger.
- Designed and implemented observability solutions with Prometheus and Grafana.
- Owned the full development lifecycle: architecture design, implementation, testing, and production deployment
- Delivered a system serving 1,300+ users, consolidated for global usage
- Eliminated approximately 800 security vulnerabilities

Advice Compliance Solutions - December 2021 - January 2023 - C# Developer

- Developed RESTful APIs using C# and .NET
- Implemented JavaScript-based features and frontend functionalities
- Contributed to corporate systems focused on compliance and regulatory requirements

Orange Business Services - November 2020 - November 2021 LDM/NAM Intern

- Managed network service orders and projects for the North America region
- Collaborated within a U.S.-based international team
- Acted as a liaison between technical and operational departments
- Gained experience in a global corporate environment

Education

Bachelor's Degree in Computer Engineering Feb 2020 – Mar 2026

Federal Center for Technological Education Celso Suckow da Fonseca (CEFET/RJ)

International Experience - Spain

University of Valladolid | September 2025 - February 2026

Selected based on academic merit for Santander Open Academy and CEFET/RJ scholarships. Academic exchange in Computer Engineering with parallel professional experience as a Full Stack Developer.

Skills

Backend: .NET, C#, Node.js, TypeScript, REST APIs

Frontend: React.js, Vue.js, JavaScript

Cloud & DevOps: AWS, Docker, CI/CD

Databases: SQL Server, PostgreSQL, MySQL, SAP HANA, Amazon Athena

Messaging & Distributed Processing: Amazon SQS, Amazon SNS, Amazon S3

Testing: Jest, Supertest, Unit Testing, Integration Testing

Observability: Prometheus, Grafana, Amazon CloudWatch

AI & Applied Research

Fine-tuned a LLaMA model (~1B parameters) using QLoRA (4-bit quantization) and Unsloth for DDoS attack classification and detection. Developed GenGuardian, a custom tool featuring a complete training, evaluation, and deployment pipeline executed in a virtualized environment with malicious traffic simulation.
